# Introducing The ix Solution

## **At Last: A Unified Media Hub**

Let PACCO ix and Microsoft Windows XP Media Center Edition 2004 handle all your home entertainment. Enjoy live and recorded TV, streaming and prerecorded music, broadcast and Internet radio, and your entire collection of digital photos—all from a single, easy to use system. Check e-mail, play video games, pause and store broadcast TV programming, and burn DVDs of your home movies and other media files. Browse and purchase movies and music on demand. It's all at your fingertips with the powerful yet elegantly simple ix Media Center, using just a single remote control.

## **Experience the Difference**

The ix Media Center gives you not just convenience, but quality. Savor its rich, 1080i video output on a high-definition television. Program the system's digital video recorder to capture your favorite shows using Microsoft's no-fee TV program guide. And whether you're playing games or losing yourself in a favorite DVD, you'll appreciate the system's fast, 128 MB graphics card. The ix Media Center supports 5.1-channel surround sound through a dedicated digital-audio output — simply attach a surround-processing AV receiver and multichannel speaker system and prepare to be enveloped by stunningly vivid effects and music from your DVDs or external DTV receiver. The pre-installed Internet Explorer 6 offers new and improved features to simplify Web browsing, increase reliability, and help keep

your personal information private. With the system's Network Setup Wizard, all your computers can share the same printers, devices, files, and Internet connection. Use Microsoft Windows Movie Maker 2 to capture, edit, show, and organize movies with the help of your built-in DVD burner. Transfer digital video from a digital camera to your ix Media Center, then create and edit your movies with a few simple drag-and-drop moves — and turn your entertainment room into a personalized movie-screening theater. Safety features include encryption, System Restore, and an Internet firewall.

## **Universal Connectivity**

Now, connecting your entertainment gear is not only possible, but easy. Front- and rear-panel IEEE 1394/USB 2.0 interfaces make it a snap to plug in a MiniDV camcorder or a feed from an external PC or hard drive. A front-panel 6-in-one Media Reader handles cards from all digital cameras including Memory Stick and all digital camcorders, so your system will always be compatible with your media equipment, even if you switch to a different format. With its DVI digital-video connection, component- and composite-video outputs, and other interfaces, the ix Media Center is more than ready for use with both high-end plasma and LCD monitors and standard-definition CRT sets. Want to manage your satellite receiver or cable box? No sweat. You can do it all from the system's single remote control. The choices are yours.

## Total Independence

The ix Media Center's unique design features two independent hard drives: a built-in drive for software and a slim, swappable, high-capacity drive to hold your media and personal files. Another unique feature is the system's dual-power-supply construction, which lets you watch TV, listen to broadcast FM radio, or play DVDs, all without draining valuable resources from the PC. Further, you'll enjoy instant access to TV, FM radio, and DVD playback right when you power up the system \_ you don't have to wait for the PC to boot first.

## The ix Solution

Microsoft Windows XP Media Center Edition 2004 and PACCO Group Inc. have created the answer to your home-entertainment needs. The ix Media Center unifies all your entertainment devices under one tidy roof, and the supplied ix Media Center remote puts complete command of everything right at your fingertips. Put an end to living-room clutter and PC entertainment confusion. The ix Media Center with Windows XP Media Center Edition 2004 is the perfect entertainment solution for 21st-century living.
